

IN THE CLAIMS:

Amend claims 1, 2, 5, 6, 8, 9, 10, 11, 12, 16, 17, 19, and 24 and add new claims

32-34 as follows:

D/ 1. (Amended) A method of transmitting sport data between a mobile terminal and a sport database connected to a sport server, the sport server including a processor for managing sport data to be saved in the sport database and for managing queries of the database, said method comprising the steps of:

(a) establishing a communication connection between the mobile terminal and the sport server using a public mobile communications network so that the mobile terminal is in communication with the sport server;

(b) determining, by the sport server, a type of mobile terminal used in said step (a) and selecting a prompt display appropriate for the determined type of mobile terminal;

(c) setting the mobile terminal in a sport data input mode in response to receiving the prompt display and selecting a selected sport to which sport data to be inputted pertains;

(d) inputting the sport data into the mobile terminal in communication with the sport server;

(e) directly transmitting the inputted sport data from the mobile terminal to the sport server using the communication connection established in said step (a) as the sports data is input by the user in said step (c); and

(f) recording the sport data in the sport database.

D2 2. (Amended) The method of claim 1, further comprising the step of determining, by the sport server, a geographical location of the mobile terminal in communication with the sport server and determining a field in which to enter the sport data in the sport database in response to the geographical location determined by said sport server before said step (f) and wherein said step (f) further comprises recording the sport data in the field in the sport database determined by said sport server.

D3 5. (Amended) The method of claim 1, wherein said step (c) comprises the steps of prompting, by the server, a user for a sport and inputting, by the user, a selected sport and said step (d) comprises prompting, by the server, a user for the sport data using a prompt specific to the selected sport, and inputting, by a user, of sport data into the mobile terminal in communication with the sport server.

6. (Amended) The method of claim 1, further comprising the step of identifying, by the sport server, a type of the mobile terminal that is in communication with the sport server in said step (a) and said step (b) comprises determining display and communication parameters for the mobile terminal.

D4 8. (Amended) The method of claim 7, wherein the sports database includes a plurality of fields and said method further comprises the step of determining a field in the sport database in which to store the sport data based on the selected sport and the sport data input by the user in said step (d).

9. (Amended) The method of claim 2, wherein said step (c) comprises the steps of prompting, by the server, a user for a sport and inputting, by the user, a selected sport and said step (d) comprises prompting, by the server, a user for the sport data using a prompt specific to the selected sport and inputting, by a user, of sport data into the mobile terminal in communication with the sport server.

10. (Amended) The method of claim 9, further comprising the step of identifying, by the sport server, a type of the mobile terminal that is in communication with the sport server in said step (a) and said step (b) comprises determining display and communication parameters for the mobile terminal, wherein said steps of prompting comprises transmitting a prompt to a display of the mobile terminal using the determined display and communications parameters.

11. (Amended) The method of claim 10, wherein said sport database includes a plurality of fields and said method further comprises the step of determining a field in the sport database in which to store the sport data based on the selected sport and the sport data input by the user in said step (d).

12. (Amended) A system for managing sports data related to statistics for one or more sports, comprising:
a sport database for storing sports data;

~~cont~~
D5

a sport server connected to a public mobile communications network and comprising a processor operatively connected to said sport database for managing the sports data;

an input device arranged for receiving an input of sports data and directly transmitting the sports data to said sport server using said public mobile communications network as said sports data is input to said input device, said sports server operatively arranged for receiving the sports data from said input device and for managing queries to said sport database from said input device;

a user database connected to said sport server for storing user data for each user having authority for inputting the sports data;

a connection database connected to said sport server for storing connection data for a plurality of different types of input devices for inputting the sports data;

means for determining a type of input device in communication with said sport server and for determining display and communication parameters of the input device; and

means for transmitting prompts to the input device and receiving replies to said prompts using the determined display and communication parameters for determining the sports data received from the input device.

D6

16. (Amended) The system of claim 15, wherein said sports server comprises means for determining a geographical location of the mobile terminal.

17. (Amended) The system of claim 16, wherein said means for selecting a selected field comprises means for selecting a selected field of said plural fields in said sport

Cont

database in which to store the sports data in response to the replies to said prompts and in response to the geographical location of the mobile terminal.

D7 19. (Amended) The system of claim 18, wherein said sport database comprises a plurality of fields and said sport server comprises means for selecting a selected field of said plural fields in said sport database to store the sports data in response to the selected sport.

D8 24. (Amended) A mobile terminal for transmitting sports data to a sports database of a sports server connected to a communication network, said mobile terminal comprising:

means for initiating a communication connection with the sports server using a public mobile communications network;

means for setting the mobile terminal in a sports data input mode;

means for receiving a selection of a selected sport to which the sports data to be inputted pertains; and

means for receiving sport data at the mobile terminal and directly transmitting the sport data from the mobile terminal to the sports server using the public mobile communications network as the sports data is received by the mobile terminal.

D9 32. (New) The method of claim 1, wherein said step (d) of inputting the sport data comprises automatically adding the sport data using a detecting system.

Cont
D9

33. (New) The method of claim 12, wherein said input device is operatively arranged for automatically receiving said sport data from a detecting system which detects the sport data to be input.

34. (New) The method of claim 24, wherein said input device is operatively arranged for automatically receiving said sport data from a detecting system which detects the sport data to be input.
